Letizia Maggio, after having enriched her education through goldsmithing and ceramics courses with internationally renowned artists, has translated everything she has learnt into research with the materials and languages of contemporary jewellery. Her works, micro works which blend sculpture, painting and installative language, are mainly focused on communication, aiming to both a reaction and to the start of an effective relationship with the viewer/wearer.

She works with different materials and tends to different directions but the flow of time and the power of emotions are a leit- motif in her collections, strongly supported by photography.
